Composable No-Code Platform

Smarter Enterprise Applications @10X Business Speed

UCBOS®

Solution Highlights

Business sustainability is key and Supply Chain plays a critical role. Supply Chain is complex and non-linear, which has the attributes to create problem chains.

Key Benefits & Diffrentiators

Business sustainability is key and Supply Chain plays a critical role. Supply Chain is complex and non-linear, which has the attributes to create problem chains.

Introduction

UCBOS, Inc. is a USA-based No-Code Software firm helping enterprises achieve strategic business advantage through a 100% Configurable Supply Chain Visibility, Execution and Orchestration Platform that delivers business outcomes 10x faster. Its vision is to help enterprises self-learn, adapt, and achieve ontology-driven interoperability using dynamic semantic data models with explainable AI and rapidly gain supply chain clarity, customer promise reliability, and business agility.

Customer Challenges

Business sustainability is key and Supply Chain plays a critical role. Supply Chain is complex and non-linear, which has the attributes to create problem chains. In addition, it is under a constant state of disruption, leaving enterprises scrambling to address dynamic problem chains around customer reliability, capacity crunch, supply & demand imbalances, price inflation, equipment shortages, port congestions, global trade shifts, and weather patterns.

Reference Architecture

A "Zero Code" and "No-Code" Semantic Integation platform acting as a middleware, orchestrator, real-time database, analytics engine and enterprise application builder seamlessly interoperating with existing enterprise data, applications, machines, and things.

"The UCBOS platform delivers on the promise of accelerating speed to market while reducing the complexity and costs that are associated with the technology enablement of today's complex supply chains!"

-Nick Costides, Ex-President of UPS
